Energy Efficiency

The ultimate sustainable living package.

The houses in Ashfield are classified as low energy/low CO2 homes with an 'A' BER rating. They include an innovative heating system which combines quality construction methods and high levels of insulation with clever use of renewable energy to provide maximum comfort in all seasons.

The central heating system is an A-class Dimplex Air Source Heat Pump located externally. This air to water heat pump system is the product of many years of research and development by Dimplex Renewables and represents the best heating technologies available.

This system provides energy efficient central heating and large capacity hot water storage. Heat pumps extract the sun's energy stored in the environment and raises it to a temperature suitable for heating and hot water purposes.

You can view further information from Dimplex Renewables on how the system works on www.dimplexrenewables.com

High levels of insulation incorporated into the roofs, walls and floors.

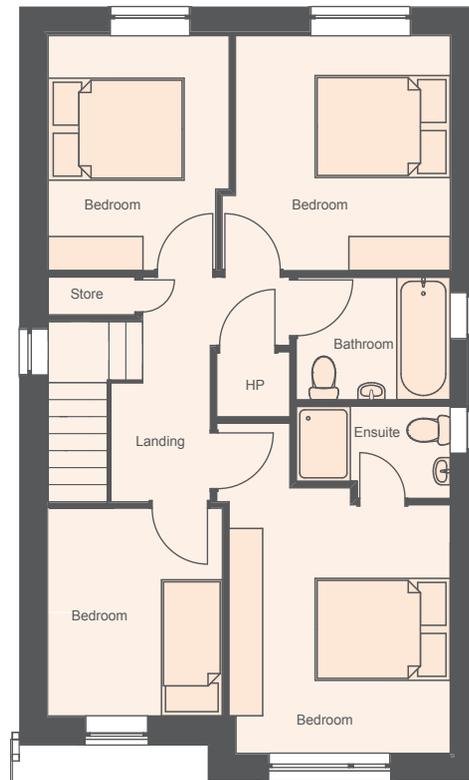

High performance Grady Joinery double glazed windows.

Highly efficient A2-A3 BER Rating contributing to a reduction in the cost of heating the houses.
